

NCRI LYMPHOMA GROUP: Stanford V vs ABVD for Advanced Hodgkin's Disease

PLANNING EXERCISE

Please ensure you have downloaded the following files:-

- Case histories
- Prescription forms
- Mediastinum patient image
- Neck patient image

We are undertaking the quality assurance programme for the radiotherapy part of this trial. We have started this with a questionnaire designed to help us better understand the issues involved in this trial and are now carrying out a planning exercise. We present you with two patients, their case histories and radiographs. Please define the treatment fields for the patient as you think appropriate. *Please ignore any markings on the images (such as cross-hairs and wires)*. Draw the treatment fields directly onto the radiographs, as well as any shielding (blocks or MLCs), and complete the attached form outlining the treatment prescription and delivery technique.

Thank you very much in advance for your time and effort.

Patty Díez
Research Physicist

Prof Peter J Hoskin
Radiotherapy Consultant
